

DRYDOCK · GOVERNED BLUEPRINT DELIVERY

SEA TRIALS

Thirty positive, testable outcomes. Drydock is delivered — and the ship leaves the dock — when every box is checked.

THE THREE THAT CONVERT

The Ten-Minute Demo

1

- ☐ Recorded on a real project: blueprint → plan → build → QuarterDeck decision → incremental rebuild. The loop running beats the written spec.

Ship's Log → Blog

2

- ☐ A public design-decision trail generated by Drydock itself — a self-updating portfolio, in your own voice.

The Spec Kit Import

3

- ☐ A real public Spec Kit project becomes a reviewable Blueprint. The demo legible to everyone who knows the category.

COMMAND SURFACE

9

- ☐ **No deferred stubs** — every Blueprint command implemented and tested
- ☐ **plan** init · create · show — with the `PROMPT_WARN_KB` oversize warning
- ☐ **build** · status · score — frontier execution, state report, `SCORECARD.md`
- ☐ **QuarterDeck** — evidence, questionnaires, board; approve / revise / reject / reopen write back through one decision writer
- ☐ **iterate** — Blueprint and target updated together; rationale appended to the Ship's Log
- ☐ **analyze** — drift, open questions, spec changes not covered by the Log
- ☐ **rigging** compact · update · verify — governance propagated and checked
- ☐ **document** generate · assemble — versioned `docs/index.html`
- ☐ **import** auto · source · speckit — proposed Blueprint plus conversion report

COMMUNICATION

4

- ☐ **Whitepaper** published on the Web Cloud Studio site
- ☐ **Drydock documents itself** — its own docs generated by `drydock document`, published
- ☐ **README quickstart** verified start-to-finish on a machine that has never seen the repo
- ☐ **First design post** derived from the Ship's Log, published

DISTRIBUTION

4

- ☐ **Published on PyPI** under the reserved name — `pip install drydock` and `uv tool install drydock` work from a clean machine
- ☐ **Installed wheel verified** — Rigging resolves from packaged resources, not the source tree
- ☐ **CI green** on GitHub Actions — tests, lint, format, coverage threshold
- ☐ **Tagged releases** with `CHANGELOG.md` entries; `drydock --version` reports correctly

PROOF OF METHODOLOGY

6

- ☐ **One real project** delivered end-to-end, accepted entirely through the QuarterDeck
- ☐ **Incremental rebuild proven** — one spec edit rebuilds only stale blocks; accepted work untouched
- ☐ **Failure recovered** through the QuarterDeck reopen path — no hand-edited plan files
- ☐ **Both providers** — `claude` and `codex` complete the same build
- ☐ **Prototyper retired** — workflows fully ported; V1 archived read-only
- ☐ **Contract propagated to** `RulesEngine/SPECIFICATION_CONTRACT.md`, templates, validation — Rigging mirror verified identical
